EDUCATION

SRM Institute of Science and Technology

Bachelor of Technology in Computer Science

Chennai, Tamil Nadu

Aug 2023 – Present (2027 Passout)

EXPERIENCE

Sentrix AI Security Platform (TalenciaGlobal)

Software Trainee

On-Site

July 2026 – Present

- Built **RADIX**, a data-intensive enterprise platform using **FastAPI**, **PostgreSQL**, **Redis**, and **AWS Bedrock**, exposing REST APIs for company research, scoring, and analytics – supporting structured analysis of heterogeneous business data.
- Managed **164 heterogeneous research fields per company** by designing a hybrid relational/EAV **PostgreSQL data model**, enabling scalable data storage and flexible schema evolution without repeated migrations.
- Integrated **malware scanning and CVE checks into GitHub Actions CI/CD**, introducing automated security validation and release controls to identify risks before deployment.
- Engineered a distributed background-processing layer using **ARQ**, **Redis**, and **PostgreSQL advisory locks**, ensuring controlled concurrent processing and reliable execution of data-intensive research workflows.

XenKrypt Technologies

DevOps Intern

On-Site

Dec 2025 – Mar 2026

- Provisioned and automated an **AWS EC2 Kubernetes environment** with GitLab, Harbor, ArgoCD, and NGINX Ingress, establishing controlled deployment workflows and standardized infrastructure configuration.
- Rebuilt **GitHub Actions CI/CD workflows** using change detection and matrix-based execution, reducing build and test time from **22 minutes to 4 minutes** while improving automated validation across software changes.
- Investigated deployment and infrastructure failures across Kubernetes, Docker, networking, and service configurations, applying systematic troubleshooting to identify configuration gaps and restore reliable application operation.
- Deployed **Odoo** and **n8n** workflow-automation services to support internal business processes, extending engineering automation into operational workflows.

PROJECTS

OPSACADEMY | *Node.js, Python, Docker, Dockerode, MongoDB* [\[Live Demo\]](#) [\[GitHub\]](#)

Aug 2026 – Present

- Built a self-service sandbox platform using **Node.js**, **Dockerode**, **node-pty**, and **MongoDB**, automating environment provisioning and lifecycle management for hands-on technical labs.
- Implemented automated inactivity detection and resource cleanup, reducing idle resource usage by **90%** while maintaining sub-50ms sandbox claim latency.
- Developed **Jest API test suites** and integrated them with **GitHub Actions**, introducing automated validation to detect regressions before deployment.

AETHER CLINIC | *Node.js, Docker, Kubernetes, AWS, LangGraph* [\[Live Demo\]](#) [\[GitHub\]](#)

Oct 2025 – Present

- Built a **multi-agent LangGraph RAG pipeline** with Triage, Retrieval, and Safety Oversight agents over 44+ indexed ChromaDB chunks, validating retrieved context before generating responses.
- Decomposed a monolithic application into distributed services using **Docker**, **Kubernetes**, **AWS EC2**, **ECR**, and **NGINX Ingress**, enabling HPA-based scaling from **2–10 backend pods**.
- Diagnosed cross-service communication failures caused by hardcoded localhost references and misconfigured service URLs, restoring reliable communication across the distributed application.

ACHIEVEMENTS

- **3rd Place, Hackalite'26** – National Level Hackathon.

TECHNICAL SKILLS

Languages: Python, JavaScript, TypeScript, C/C++, SQL, Bash

Data & Analytics: SQL, PostgreSQL, MySQL, MongoDB, Redis, Data Analysis, Data Validation, Data Quality, REST APIs

Software Engineering & Testing: FastAPI, Node.js, Express.js, Microservices, API Design, Unit Testing, Test Automation, Secure Coding, Software Design Patterns

Cloud & Infrastructure: AWS (EC2, S3, VPC, Lambda), Docker, Kubernetes, Terraform, Infrastructure as Code

Automation & DevOps: GitHub Actions, Jenkins, ArgoCD, GitOps, CI/CD, Workflow Automation, System Troubleshooting

AI & Emerging Technology: LangGraph, RAG Pipelines, AWS Bedrock, Agentic AI Workflows, Prompt Engineering

Core Concepts: Data Structures & Algorithms (250+ LeetCode), OOP, System Design, Software Design Patterns, Risk Identification
